CHEM6394: Stereochemistry

Prof. Ognjen Š. Miljanić

Final Exam May 10, 2022

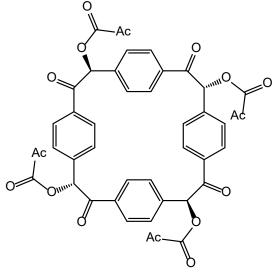

Name:		
(print legibly)	Last	

First

Last 4 Digits of Student ID Number:

Read all directions very carefully. Write your answer legibly in the designated spaces. Total number of points is 350. This exam is supposed to have eight (8) pages, with the last page intentionally left blank.

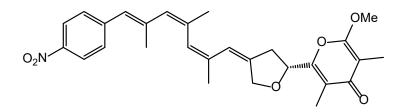

1. Is the molecule below chiral or achiral? Provide a detailed explanation of your answer and refer to symmetry
elements (or absence thereof) that justify your answer.50 points

DO NOT WRITE IN THIS SPACE

FINAL SCORE

2. The compound on the bottom undergoes two consecutive electrocyclizations—first an eight-electron one, and then a six-electron one. Draw the structure of the final product with a complete description of its stereochemistry. 50 points

3. Draw a qualitative conformational energy diagram of methylcyclohexane, keeping in mind that its two chair conformations (as well as its four boat conformations) are not the same in energy. In other words, this diagram will look quite different than the one for cyclohexane. 45 points

4. Define, in your own words, the following terms. Be succinct but precise, and feel free to use chemical structures to illustrate your definitions. $8 \times 5 = 40$ points

atropisomerism

parity violation

anancomeric

gauche conformation

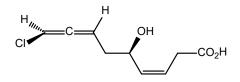

Cram-Felkin-Anh rules

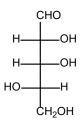

circularly polarized light

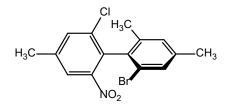

stereoselective reaction

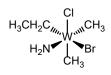

cheletropic reaction

5. Assign the configurations of the following molecules using stereochemical designators: R/S, P/M, A/C, Δ/Λ , E/Z, etc. In compounds with multiple stereocenters, assign the configuration of each one. 65 points

6. Draw the products of the following reactions, including a detailed representation of their stereochemistry. $10 \times 10 = 100$ points H AcO $$\rm BH_3$$ then NaOH/H_2O_2 1,3-sigmatropic shift complete the structure D Ĥ Cope rearrangement H₂ Lindlar's catalyst n electrocyclic (S,S)-diethyltartarate *t*-BuOOH / Ti(O*i*-Pr)₄ ring opening [%]OMe 1) PhMgBr /₊Et₂O 2) H₃O Н 0 HO HBr Me Рł ⁺t-Bu Br $AcO^{-}\Delta$ strong bulky base Me IIIII H -D Me Ĥ OTos
